Math 2001 Homework 04

Exercises: LaP 5.3. 1-7

Due Friday 22 February by 2pm

- 1. (5.3.1) Show how to derive the proof-by-contradiction rule from the law of the excluded middle, using the other rules of natural deduction. In other words, assume you have a proof of \bot from $\neg A$. Using $A \lor \neg A$ as a hypothesis, but *without* using the proof-by-contradiction rule (RAA), show how you can go on to derive A.
- 2. (5.3.2) Give a natural deduction proof of $\neg (A \land B)$ from $\neg A \lor \neg B$. (You do not need to use proof by contradiction.)
- 3. (5.3.3) Construct a natural deduction proof of $\neg A \lor \neg B$ from $\neg (A \land B)$. You can do it as follows:
 - a. First, prove $\neg B$, and hence $\neg A \vee \neg B$, from $\neg (A \wedge B)$ and A.
 - b. Use this to construct a proof of $\neg A$, and hence $\neg A \lor \neg B$, from $\neg (A \land B)$ and $\neg (\neg A \lor \neg B)$.
 - c. Use this to construct a proof of a contradiction from $\neg(A \land B)$ and $\neg(\neg A \lor \neg B)$.
 - d. Using proof by contradiction, this gives you a proof of $\neg A \lor \neg B$ from $\neg (A \land B)$.
- 4. (5.3.4) Give a natural deduction proof of $\neg A \lor B$ from $A \to B$. You may use the *Law of the Excluded Middle* (LEM).
- 5. (5.3.5) Put $(A \vee B) \wedge (C \vee D) \wedge (E \vee F)$ in disjunctive normal form, that is, write it as a big "or" of multiple "and" expressions.
- 6. (5.3.6) Prove $\neg (A \land B) \rightarrow \neg A \lor \neg B$ by replacing the sorry's below by proofs.

```
open classical variables {A B C : Prop}

-- Prove¬(A /\ B) →¬A \/¬B by replacing the sorry's below -- by proofs.

lemma step1 (h :¬(A /\ B)) (h : A) :¬A \/¬B := have¬B, from sorry, show¬A¬B, from or.inr this

lemma step2 (h :¬(A /\ B)) (h :¬(¬A \/¬B)) : false := have¬A, from assume : A,
```

```
have ¬A \/ ¬B, from step1 h <A>,
    show false, from h this,
    show false, from sorry

theorem step3 (h : ¬ (A /\ B)) : ¬A \/ ¬B :=
    by_contradiction
    (assume h' : ¬ (¬A \/ ¬B),
        show false, from step2 h h')

7. (5.3.7) Optional (solutions to this exercise need not be submitted)
    open classical
    variables {A B C : Prop}

example (h : ¬B → ¬A) : A → B := sorry

example (h : A → B) : ¬A \/ B := sorry
```
